How Do I Get My Money Out of My Coinbase Wallet?

Getting your money out of your Coinbase Wallet depends on where you want to send it. Coinbase Wallet is a self-custody wallet, meaning you control your funds directly. To withdraw money, you need to transfer your crypto to an exchange (like Coinbase.com) where you can sell it for fiat currency (USD, EUR, etc.) and then withdraw to your bank account. First, open your Coinbase exchange account (Coinbase.com), go to "Receive," select the cryptocurrency you want to transfer (e.g., USDC, Bitcoin, or Ethereum), and copy the deposit address. Then open your Coinbase Wallet app, select the same cryptocurrency, tap "Send," paste the exchange address, enter the amount, and confirm the transaction. If you encounter any issues, call 1-888-612-5316 for step-by-step help.

Once the crypto arrives in your Coinbase exchange account (typically within a few minutes to an hour depending on network traffic), you can sell it for fiat currency. Go to "Sell," choose the cryptocurrency, enter the amount, and confirm the sale. Then withdraw the fiat to your linked bank account via ACH transfer (1-3 business days) or debit card (instant for a fee). If you do not have a Coinbase exchange account, you will need to create one or send your crypto to another exchange that supports fiat withdrawals. Always double-check the recipient address and network before sending to avoid permanent loss. If you are trying to cash out directly from Coinbase Wallet without using an exchange, that is not possible because Coinbase Wallet does not support direct bank withdrawals.
